HAYABUSA (99-20) 3 POSITION LOWERING LINK INSTALLATION INSTRUCTIONS

The 3 position lowering link for the Suzuki Hayabusa allows for an easy way to lower the bike. By lowering the bike's center of gravity it will make the bike easier to launch from a dead stop. It also allows shorter riders to gain positive foot traction on the ground.

Check Package Contents:

The Package Contents Include:

1. One (1) Left Side Link
2. One (1) Right Side Link

If your package contents differ, please contact Brock's Performance at 937-912-0054.

For additional installation support please refer to the OEM service manual.

Installation Notes:

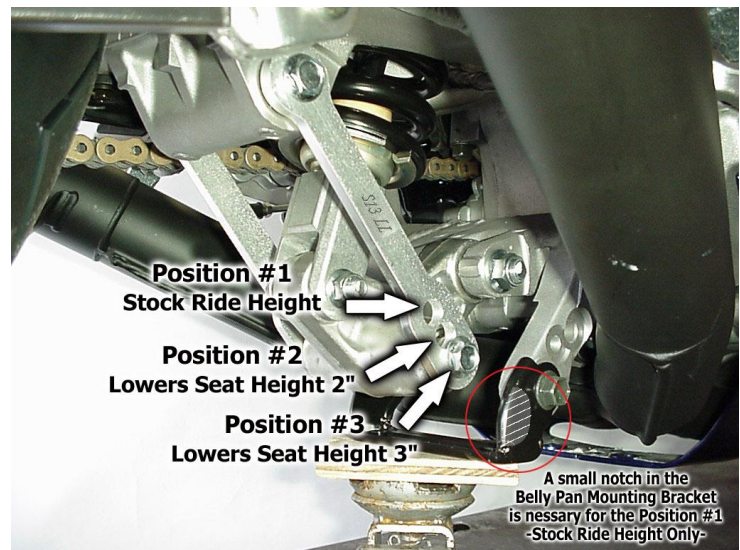

- Installs using OEM nuts, bolts and bushings.
- Bike must be properly supported before installation to prevent personal injury or damage to the machine.
- Adjustable kickstand required - Billet Adjustable [BrockSTANDs](http://BrockSTANDs.com) are available at BrocksPerformance.com.
- Belly pan mounting bracket must be modified to use Position #1.
- Check drive chain tension after making adjustments to ride height.

Instructions:

1. Properly support the bike and place a scissor jack (or similar type) beneath the engine. Insert a small piece of wood between the jack and engine to prevent metal-on-metal contact. Raise the bike so the rear wheel is just off the ground.
2. Remove the OEM bolts and nuts securing the OEM suspension links.

Note: Bolts should be easy to remove. If pressure is still on bolts, adjust the scissor jack up/down until the bolts slide free.

3. Install the 3 position link in the desired position.
4. Secure reusing the OEM hardware. Torque bolts/nuts to 56.5 lb-ft (78 N·m).

ALL BROCK'S PERFORMANCE PRODUCTS ARE DESIGNED FOR CLOSED-COURSE RACETRACK USE ONLY!
