Brock's Performance

About Us

Driving a motorcycle from point A to point B in a straight line is easy.
Doing it faster than the guy next to you is a little more difficult.
Beating the best in the world is a science.

At Brock's Performance, we have been studying the science of
motorcycle acceleration for over 25 years. Incorporated in 2002 after
a 20 year obsession for motorcycles and racing morphed into a full time
profession. Brock's Performance in Dayton, Ohio epitomizes a company
built by sheer determination. Fueled by his life-long passion and love
for motorcycles, owner, Brock Davidson established a world-respected
business whose aim is to lead the industry in innovation and the
development of performance components.

"We engineer our components to be as at home on the street as they
are on the race track, so whether you compete at the drag strip, land
speed racing, or national level road racing, we have products to suit
your needs," says Brock. "We don't like to make concessions, and we
don't expect you to either."

As our company continues to grow, and we maintain our focus toward
other aspects of OEM-based motorcycle performance, we promise to
uphold our small-business commitment to every valued customer. Our
phone technical support is unrivaled, as we consistently train our staff
on the technical aspects of our products, meaning every employee can
answer questions with authority.

When you choose Brock's Performance as your expert source, you
receive the highest quality performance products, backed by years of
experience, plus free technical support. Whether you're a direct
consumer, dealer, or distributor, you'll appreciate our hands-on service
that continues long after you've received your order, guaranteed.
